

<b>Name</b>	A New Era for Conservation: Review of Climate Change Adaptation Literature
<b>Description</b>	From the Executive Summary: This literature review summarizes recent science on climate change adaptation in the context of natural resource management and fish and wildlife conservation. The review was prepared as a background contribution to the Adaptation 2009 conference being held February 2009 in Washington, DC, under the auspices of the National Council on Science and the Environment (NCSE) and National Wildlife Federation (NWF). The review starts with an overview of the concept of climate change adaptation, including overarching principles and barriers experienced to date in adaptation planning and implementation. We then provide specific examples of adaptation strategies for four broad habitat types: (1) forests; (2) grasslands and shrublands; (3) freshwater systems; and (4) coasts and estuaries.
<b>Type</b>	- PRODUCTS: Plans, Assessments, Studies - PRODUCTS: Other
<b>Sector</b>	- Managed Ecosystems - Natural Ecosystems - Biota
<b>Focus Area</b>	- Coasts and Climate Resilience (including sea-level rise) - Climate Impacts on Water Resources - Changes in Extremes of Weather and Climate - Conservation/ Restoration of Sensitive Species and Habitats
<b>Region</b>	- National
<b>Lead Agencies</b>	National Wildlife Federation
