

Name	Coastal Impacts, Adaptation, and Vulnerabilities: A Technical Input to the 2013 National Climate Assessment
Description	From the Executive Summary: This report, one of a series of technical inputs for the third NCA conducted under the auspices of the U.S. Global Change Research Program, examines the known effects and relationships of climate change variables on the coasts of the U.S.. It describes the impacts on natural and human systems, including several major sectors of the U.S. economy, and the progress and challenges to planning and implementing adaptation options.
Type	- PRODUCTS: Plans, Assessments, Studies
Sector	- Infrastructure - Managed Ecosystems - Natural Ecosystems - Economic Resources
Focus Area	- Coasts and Climate Resilience (including sea-level rise)
Region	- National
Lead Agencies	USGS and NOAA
Contacts	Virginia Burkett, USGS, virginia_burkett@usgs.gov Margaret Davidson, NOAA, margaret.davidson@noaa.gov
