

Name	Climate Change Vulnerability Index (CCVI)
Description	The NatureServe Climate Change Vulnerability Index can help identify plant and animal species that are particularly vulnerable to the effects of climate change. Using the Index, you apply readily available information about a species' natural history, distribution and landscape circumstances to predict whether it will likely suffer a range contraction, population reductions, or both during the coming years. You can use the Index as part of a variety of analyses, including assessing the relative risk of species listed in State Wildlife Action Plans or part of any assessment of the vulnerability of species to climate change.
Type	- PRODUCTS: Plans, Assessments, Studies
Sector	- Biota
Focus Area	- Conservation/ Restoration of Sensitive Species and Habitats
Region	- National
Lead Agencies	NatureServe
Contacts	Bruce Young, NatureServe, bruce_young@natureserve.org
