

Name	Climate researchers now predict the planet will warm by 6.3 degrees Fahrenheit by the end of the century
Description	Climate researchers now predict the planet will warm by 6.3 degrees Fahrenheit by the end of the century even if the world's leaders fulfill their most ambitious climate pledges, a much faster and broader scale of change than forecast just two years ago, according to a report released on Dec 10, 2009 by the United Nations Environment Program.
