

Name	Achieving Hazard-Resilient Coastal and Waterfront Smart Growth: Coastal and Waterfront Smart Growth and Hazard Mitigation Roundtable Report
Description	The National Oceanic and Atmospheric Administration (NOAA) and the U.S. Environmental Protection Agency(EPA) have released “Achieving Hazard-Resilient Coastal & Waterfront Smart Growth: Coastal and Waterfront Smart Growth and Hazard Mitigation Roundtable Report.” The report presents an overview of a 2011 meeting where experts from the fields of smart growth, hazard mitigation, climate change adaptation, and coastal management shared ideas on how coastal and waterfront communities could improve quality of life, use land and other resources efficiently, and create environmentally and economically sustainable neighborhoods while minimizing risks from natural hazards related to coastal and waterfront flooding. NOAA and EPA partnered with the state Sea Grant College Programs of Rhode Island, Texas, and Hawai’i to organize the roundtable.
