

<b>Name</b>	Climate Wizard
Description	New CC tool from the Nature Conservancy. The outputs of the site are color coded maps of climate change over a specific area. It allows one home in on a particular area, like Lake Champlain, and there are several cells that cover the lake, One can pick a GCM scenario (there are several to choose from) and pick the version (hi, med, low) of the intensity of the change. As for variables, it's temperature and precipitation, month by month or season by season, and there are two periods of projections along with the current situation as modeled (for a base line). One can pick the projected temperature and precipitation or the change that the projection represents from the baseline.
Type	<ul style="list-style-type: none"> <li>- PRODUCTS: Forecasts and outlooks (monthly to annual, models)</li> <li>- PRODUCTS: Projections (intra-annual to multi-decadal, including SLR and model down-scaling)</li> <li>- PRODUCTS: Maps (Imagery, geo-referenced data)</li> <li>- PRODUCTS: Viewers and Web-based Tools</li> </ul>
Sector	
Focus Area	- Changes in Extremes of Weather and Climate
Region	- National
Lead Agencies	Nature Conservancy
