Name	New Brunswick Flood History Database
Description	This system contains records of flood events in New Brunswick from 1696 to the present. The database has been compiled from multiple sources and is currently maintained by the Department of Environment and Local Government. Each record contains descriptive information on each flood, plus information on causes, magnitude, the areas affected, and (if applicable) the nature and cost of damages. The database is fully searchable and some records include photos and other supporting information.
