<b>Name</b>	A Research and Decision Support Framework to Evaluate Sea-Level Rise Impacts in the Northeastern U.S.
<b>Description</b>	Previous approaches to quantify coastal vulnerability to sea-level rise have had major shortcomings, including the possibility that their underlying assumptions are not uniformly valid. This project will conduct a study to distinguish the differing ways that coastal areas of the northeastern U.S. will respond to sea-level rise. This information will be used to develop a scientific research and decision-support program that addresses the cross-cutting and unique problems in these areas related to climate change and sea-level rise.
<b>Category</b>	- Climate-change Specific Projects
<b>Focus Area</b>	- Coasts and Climate Resilience (including sea-level rise)
<b>Region</b>	- Regional Or State -- New England -- Mid-Atlantic
<b>Status</b>	- Ongoing
<b>Lead Agencies</b>	U.S. Geological Survey, Woods Hole Coastal and Marine Science Center
<b>Contacts</b>	Robert Thieler, U.S. Geological Survey, Woods Hole Coastal and Marine Science Center, rthieler@usgs.gov,
